# AKRITI

INNOVATIVE PROTOTYPE DESIGN

# Tech Assassin

## Team Details

- ➔ Team name – Tech Assassin
- ➔ Problem Statement – Build an AI system to detect phishing emails in real time using ML, NLP, and URL analysis.

# Tech Assassin

## Brief about the idea

**X-Mail: AI-Powered Phishing Detection Platform**

X-Mail is an **intelligent cybersecurity platform** that uses **real-time machine learning** to detect phishing attempts in email content. It provides instant, high-accuracy verification through an accessible web interface, helping individuals and organizations make safer digital decisions.

**Key capabilities:**
**Real-time phishing analysis** with confidence indicators
**Custom model training** using user-uploaded datasets
**Dual-interface architecture** (Flask for production, Streamlit for experimentation)
**Modern, responsive UI** with Tailwind CSS
The platform transforms from a detection tool into a **personalized AI security assistant** by allowing organizations to train models on their own threat data—making advanced cybersecurity accessible to all.

# Tech Assassin

## Opportunities

- ➔ How different is it from any of the other existing ideas?
- ➔ How will it be able to solve the problem?
- ➔ USP of the proposed solution

| Instead of... | X-Mail Offers... |
|---|---|
| Automatic spam filters with no user control | On-demand analysis with clear results |
| Static rules that become outdated | Custom training to catch new threats |
| Expensive enterprise tools | Free & lightweight for everyone |
| URL-only checkers | Full email content analysis |

# Tech Assassin

## Opportunities

- ➔ How different is it from any of the other existing ideas?
- ➔ How will it be able to solve the problem?
- ➔ USP of the proposed solution

**Instant Detection:** Paste email → AI analyzes → verdict in <1 second
Continuous Adaptation: Upload custom datasets to retrain models against evolving threats
User Education: Confidence scores help users learn phishing indicators
Accessible Deployment: Lightweight Flask app can be deployed by any organization

**Unique Selling Proposition (USP)**
"Your Personalized AI Security Assistant"
Train-Your-Own-Model: Only lightweight tool allowing custom dataset training for organization-specific defense
Dual-Interface: Both production-ready Flask app + rapid-prototyping Streamlit version
Enterprise Accuracy, Consumer Access: ~95% detection accuracy in a simple, intuitive interface

# Tech Assassin

## List of features offered by the solution

| Feature | Benefit |
|---|---|
| Real-Time Detection | Instant email analysis with confidence score |
| Custom Training | Upload your own data to catch new threats |
| Dual Interface | Flask (production) + Streamlit (prototyping) |
| Modern UI | Clean, responsive design with Tailwind CSS |
| Lightweight | Easy to install and run anywhere |

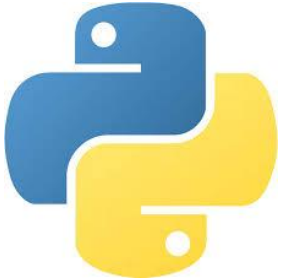
# Tech Assassin

## Technologies to be used in the solution

X-Mail uses Python with Flask and Streamlit, ML via scikit-learn and NLTK, a frontend built with HTML5, Tailwind CSS, and JavaScript, and data processing using Pandas.

Streamlit

scikit learn



HTML

tailwindcss

pandas

JS
